## **Continuation Sheet (PTO-303)**

Continuation of 11. does NOT place the application in condition for allowance because: Claim 34 remians rejected over prior art of record, for the reasons set forth in previous office action. All applied references teach the instant anionically stabilized addition polymerized polymerize aqueous dispersion, polymerized from the recited monomer species, in conjunction with Tg of the resultant polymer dispersion within the same utility. Accordingly, the examiner remains of the position that equation (I) is either inherent in prior art embodiments or it would have been obvious to one skilled in the art to determine the optimum porportions or workable ranges of the individual monomer species within the context of the same utility/applications (i.e. paint, coatings, etc.) Thus, the examiner's position is maintained.
